- **CVE-2025-27519** — No summary

AI Recommendations:

****Key Vulnerabilities:****

1. ****CVE-2020-7694****: A medium-severity vulnerability in a Uvicorn service on port 8000, with a CVSS score of 7.5 (CVSSv3) and an exploitability score of 3.9. The vulnerability allows for low-level confidentiality impact and high integrity impact.
2. ****CVE-2020-7695****: A medium-severity vulnerability in the same Uvicorn service on port 8000, with a CVSS score of 5.3 (CVSSv3) and an exploitability score of 3.9. The vulnerability allows for low-level integrity impact and no confidentiality or availability impact.
3. ****CVE-2025-27519****: A critical-severity vulnerability in an unspecified service on the same host, with a CVSS score of 9.3 (CVSSv4) and an exploitability score not defined. The vulnerability has high confidentiality, integrity, and availability impacts.

These three vulnerabilities are considered key due to their severity levels and potential impact on the affected services and systems.

****Notes:****

- * The CVE-2022-50655 and CVE-2023-53809 entries have empty CVSS values, indicating that no vulnerability information is available for these CVEs.
- * The other entries in the scan results do not appear to be vulnerable based on the provided information.
